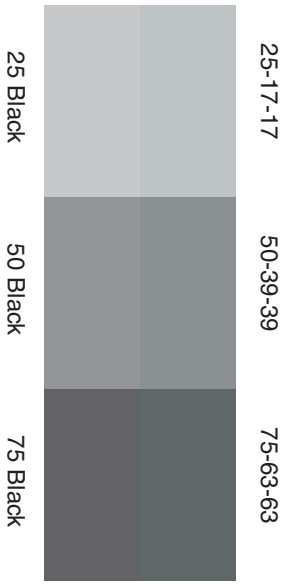
C



This test page was created to assist in the determination of print charachteristics.
Density, tonality, and the creation of the printing secondary colors will be measured and determined from the color patches marked A.
A good starting point for the Total Ink Limit will be detemined from the Color Patches marked B.
Gray Balance will be checked using the Color Patches marked C.
The control strip marked D, is an example of color bars that can assist in determining and maintaining accurate color control over the course of daily output.
